

Lenovo DaaS Invoice Validator

User Manual (Quick Guide) — Version v3.12.3 — 2026-03-18

Purpose

This tool validates Lenovo DaaS invoice PDFs by comparing Billing Summary totals, Detail line item totals, and per-invoice consistency checks. It runs locally in your browser and does not upload files to any server.

Requirements

- A modern browser (Chrome or Edge recommended)
- The file `lenovo_invoice_validator.html`
- One or more Lenovo invoice PDFs

1) Open the Tool

Double-click `lenovo_invoice_validator.html` to open it in your browser.

Screenshot 1 — Tool landing page

2) Select PDF Files

Click **Choose Files** (or **Browse**) and select one or more invoice PDFs.

Screenshot 2 — File selection area

3) Run Validation

After selection, the tool parses the PDFs automatically. Review:

- **Billing Summary** (summary totals)
- **Detail Items** (line-item totals)
- **Validation Messages** (errors and warnings)

Screenshot 3 — Results and validation area

4) Interpret Results

- **OK:** Summary and detail totals match
- **Summary-only:** Invoice number appears in summary but no detail page found
- **Missing Summary:** Detail lines exist but summary section not found
- **Unreadable/Unsupported:** PDF content could not be extracted

If any invoice is flagged, review the PDF content to confirm whether detail pages exist.

5) Troubleshooting

- **Unreadable/Unsupported:** The PDF may be scanned or image-only. Re-export from the source system.
- **Summary-only:** The Billing Summary contains invoices with missing detail pages.
- **Totals mismatch:** Check CRF/RDF adjustments, tax exclusions, and currency format.

Tips for Large PDFs

- Allow extra time for parsing
- Keep the browser tab active
- If results look incomplete, re-run the validation

Support

If you need help, provide the PDF filename(s), the exact validation message(s), and a screenshot of the result panel.
